

Weekly Self-Study Tasks to Complete

Introduction to React using TypeScript for Leaders

This document covers all of Week 3 of Phase 2 in the 4-hour Leaders model: 2 hours of instructor-led session, 1 hour of self-study video, and 1 hour of hands-on lab. The Core Resources table below fits inside the 1-hour self-study media budget. The Practice Activities section points to the Evergreen Insurance Quote Page lab, where you will rebuild the quote form from React components using props and state. Additional Content at the end is optional and sits outside the 4-hour budget.

Core Resources (~60 min)

Watch the specific resources called out below — not an entire course. Keep the running app open as you watch so you can connect each idea (component, prop, state) to the Evergreen page.

Topic	Material Description	Est. Time	Link / Reference
React Big Picture	React: The Big Picture (Cory House, Pluralsight, updated Jun 26, 2024; 1h 10m course). Watch the “Why React?” module (~25 min). Why React exists, the component model, and the trade-offs to weigh — concept-only, no hands-on required.	~25 min	pluralsight.com — React: The Big Picture
Components, Props & State	React.dev “Quick Start” and “Describing the UI” (official docs) — read and run the embedded examples on components, JSX, props, and rendering lists. Free and authoritative.	~20 min	react.dev/learn — Quick Start

Topic	Material Description	Est. Time	Link / Reference
State with useState	React.dev “Adding Interactivity” (official docs) — the guide to state, events, and the useState hook, with runnable examples. Free and authoritative.	~15 min	react.dev/learn — Adding Interactivity

Practice Activities (1 hour)

Complete this week’s hands-on lab: “Evergreen Insurance Quote Page — Rebuilding the Form in React.” You will assemble the quote form from three React components, passing data with props and managing inputs with state. The whole exercise takes about one hour.

In the lab you will:

- Open the Labfiles/evergreen-quote-react-intro folder, run npm install, then npm run dev.
- Read App.tsx to see the component tree and how props are passed down.
- Render the recent-quotes list with .map() and a key on each item.
- Define a typed props interface and finish the PremiumDisplay component.
- Add useState to QuoteForm and make the inputs controlled (value + onChange).
- Use conditional rendering to show the validation message only when it applies.
- Watch the estimate re-render instantly as you change the form.

The lab instructions (with “Why this matters” callouts throughout) are in the lab environment. Budget one hour and work at your own pace.

Additional Content (Optional)

The following resources are optional and recommended for students who want to go deeper beyond the core curriculum. They are outside the 4-hour weekly budget. Hooks beyond useState, component composition, and performance are covered in the next weeks of Phase 2, so focus this week on components, props, and state.

Topic	Material Description	Link / Reference
React	React Essential Training (Eve Porcello, LinkedIn Learning) — a complete course covering components, JSX, props, state, hooks, and project structure (Video Course).	linkedin.com/learning — React Essential Training
Reference	React.dev — the official React documentation and Learn tutorial. The authoritative source for every concept in this course (Reference / Tutorial).	react.dev
TypeScript + React	Using TypeScript — React.dev. The official guide to typing components, props, and hooks (Reference).	react.dev/learn/typescript
Vite	Getting Started — Vite Guide. Scaffolding a React + TypeScript app and the dev/build workflow (Reference).	vite.dev/guide
Practice	Scrimba — Learn React (free interactive course). Hands-on coding challenges for leaders who want to type more React (Interactive).	scrimba.com — Learn React
