

Weekly Self-Study Tasks to Complete

Phase 1 — Week 3: Intro to Web and HTML Fundamentals

This document covers all of Week 3 in the 4-hour Leaders model: 2 hours of instructor-led session, 1 hour of self-study video, and 1 hour of hands-on lab. The Core Resources table below fits inside the 1-hour self-study media budget. The Practice Activities section points to the Evergreen Insurance Quote Page lab, where you will add a new email field to the form and see built-in HTML validation in action. Additional Content at the end is optional and sits outside the 4-hour budget.

Core Resources (~51 min)

Watch the specific clips called out below — not the entire course. Every link and duration in this table has been verified against the source platform. Review the class slides alongside these materials, focusing on sections not covered in the instructor session.

Topic	Material Description	Est. Time	Link / Reference
Web + HTML Big Picture	HTML, CSS, and JavaScript: The Big Picture (Barry Luijbregts, Pluralsight, updated Jul 2, 2025) — watch Module 2: Why You Should Care About How the Web Works (13 min) and Module 3: Displaying the Web with HTML (21 min). Pure concepts; no hands-on required. Modules 1, 4, 5, 6 are optional.	~34 min	pluralsight.com — HTML, CSS, and JS: The Big Picture
HTML Forms	HTML Essential Training (Christina Truong, LinkedIn Learning, released Mar 21, 2025) — watch Chapter 7: Web Forms: “What are web forms?” (1m 11s), “HTML form basics” (7m 38s), “Input types” (3m 51s), and “Form validation” (4m 53s).	~17 min	linkedin.com/learning — HTML Essential Training (Ch. 7)

	Reinforces the instructor demo and directly prepares you for this week's hands-on lab.		

Practice Activities (1 hour)

Complete this week's hands-on lab: "Evergreen Insurance Quote Page — Add an Email Field." You will add a single new `<label> + <input type="email" required />` to the quote form, watch the browser hot-reload your change, observe the browser's built-in email validation, and commit the result. The whole exercise takes about one hour.

In the lab you will:

- Open the Labfiles/evergreen-quote-add-email-field folder in VS Code from the command line.
- Run the app with the Live Server extension and try the existing quote form.
- Read the existing `<form>` block and identify its `<label> + <input>` pattern.
- Add a new `<label>` with a new `<input type="email" id="email" required />` directly below the Full Name field.
- Save the file and watch the browser hot-reload the new field into the form.
- Submit the form with invalid and then valid email values and observe the browser's native validation tooltips.
- Clear the email field and try to submit to see the "required" rule in action.
- View the four-line change in VS Code's Source Control panel and also with "git diff" in the integrated terminal.
- Commit the change with a descriptive message ("Add required email field to quote form").

The lab instructions (with "Why this matters" callouts throughout) are in the lab environment. Budget one hour and work at your own pace.

Additional Content (Optional)

The following resources are optional and recommended for students who want to go deeper beyond the core curriculum. They are outside the 4-hour weekly budget.

Topic	Material Description	Link / Reference
HTML	HTML Essential Training (Christina Truong, LinkedIn Learning, Mar 21, 2025) — complete course (4h 13m) for anyone who wants to go beyond the core self-study clips (Video Course)	linkedin.com/learning — full course
